**AEV Poster Requirements:**

Each team will create an electronic poster that is to be submitted either on a burned CD or flashdrive and submitted within the Project Notebook. Poster grading will be included in the Final Documentation grading. The purpose of the poster is to creatively display your team’s vehicle and performance, and the design process. If your team is selected, these posters will be used at the public exhibition. We will provide you with one tri-fold poster board and a printout of the poster if you are selected to attend the public competition. The following list contains recommended items to put on your poster:

- Initial and final sketches or drawings of the vehicle – final drawing should be in Inventor
- Photographs of the vehicle at different stages
- Performance graphs (thrust, system efficiency, power, etc.)
- Flowchart of design steps taken throughout the quarter

The theme of this project, energy management and energy conservation, should be the focus of the posters. Please remember that these will be displayed to the public, so make sure they are well-organized and professional!
